

**NAME**

gmacolors – Color support utilities

**SYNOPSIS**

(If package installed globally)

package require gmacolors

(Otherwise)

source gmacolors.tcl

::gmacolors::rgb\_name *color* → *name*

**DESCRIPTION**

This module provides a set of miscellaneous utility functions dealing with colors.

::gmacolors::rgb\_name *color*

Given a *color* code in the format #rrgbb this function returns the X11 color code name corresponding to that RGB color value. If none is found, the original *color* string is returned.
