

NAME

gmacolors – Color support utilities

SYNOPSIS

(If package installed globally)

package require gmacolors

(Otherwise)

source gmacolors.tcl

::gmacolors::rbg_colors *color* → *name*

DESCRIPTION

This module provides a set of miscellaneous utility functions dealing with colors.

::gmacolors::rgb_name *color*

Given a *color* code in the format *#rrggbb* this function returns the X11 color code name corresponding to that RGB color value. If none is found, the original *color* string is returned.
