NAME

gmacolors − Color support utilities

SYNOPSIS

(If package installed globally)
```
package require gmacolors
```

(Otherwise)
```
source gmacolors.tcl
```

`::gmacolors::rgb_name` *color* → *name*

DESCRIPTION

This module provides a set of miscellaneous utility functions dealing with colors.

`::gmacolors::rgb_name` *color*

Given a *color* code in the format #*rrggbb* this function returns the X11 color code name corresponding to that RGB color value. If none is found, the original *color* string is returned.
